I am interested in the Junior Frontend Developer position.

I have completed a Frontend Developer course at Step IT Academy, where I acquired comprehensive knowledge and skills that enable me to effectively create modern web applications. I have practical experience with technologies such as HTML, CSS, SCSS, JavaScript, Git, Bootstrap, Materialize, Axios, Angular, TypeScript, and React.

I particularly focus on React due to its flexibility and powerful capabilities for creating high-quality user interfaces. I also have basic knowledge of Node.js for server-side development. Additionally, I completed a course in "Introduction to Python" at Hillel IT School, which has broadened my technical horizons.

You can view my projects in my GitHub repository: https://github.com/Eduardd97?tab=repositories.

I am confident that my experience and knowledge will allow me to be a valuable member of your team. I would be happy to discuss the details of my application during a personal meeting or phone interview.

With best regards,

**Euard Kozeichuk**
